

EXPLORING ELECTRODES

A variety of Exploring Electrodes are available for use with D. E. Stearns Holiday Detectors.

Full Circle Spring Electrodes are available in 2" increments of pipe OD, from 2" OD to 36" OD and beyond. Half Circle Spring Electrodes are available if there are fittings, joints and other obstructions to a full circle electrode.

The Silicone-Rubber brush works very well on joints, weld seams and tanks. If the coating has a rough surface or significant peaks and valleys, we recommend using one of the two types of wire brushes available.
